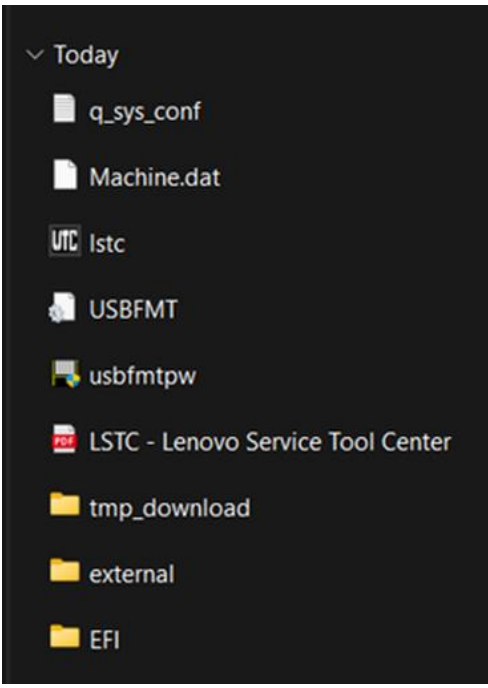
# Create Your U1 USB With the LSTC

## NON-THINKPADS

* Use the LSTC to create, format, and update your U1 USB.
* A Servicer ID is required to download files.
* Step 2 will erase your USB data; back-up files if needed.

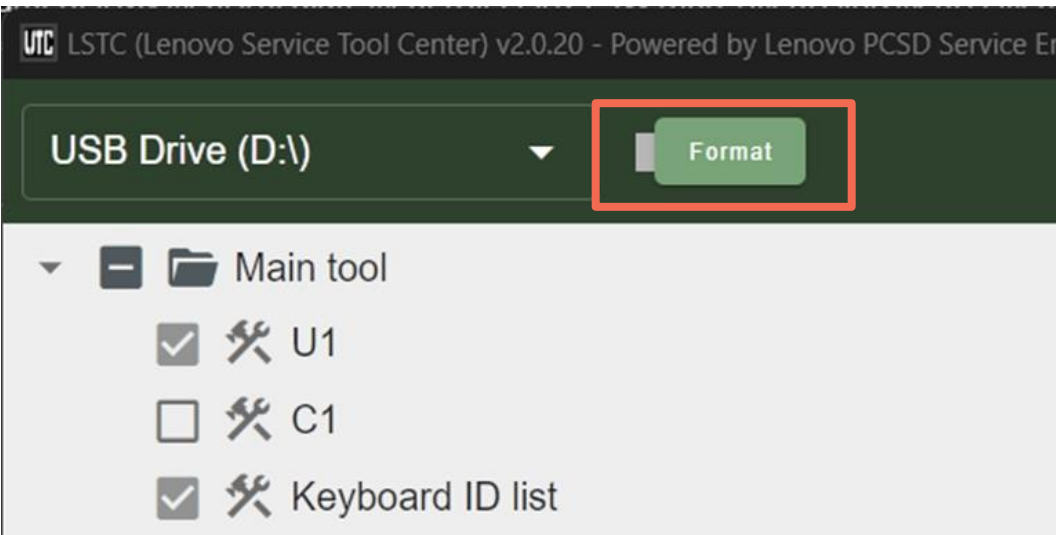
## Step 1. Download the LSTC

1. Sign into eSupport with your Servicer ID.
2. Download the Lenovo Service Tool Center Utility to your local drive.
3. Extract files. Enter **LenovoLSTC** for the password.
4. Your unzipped folder should look like this:

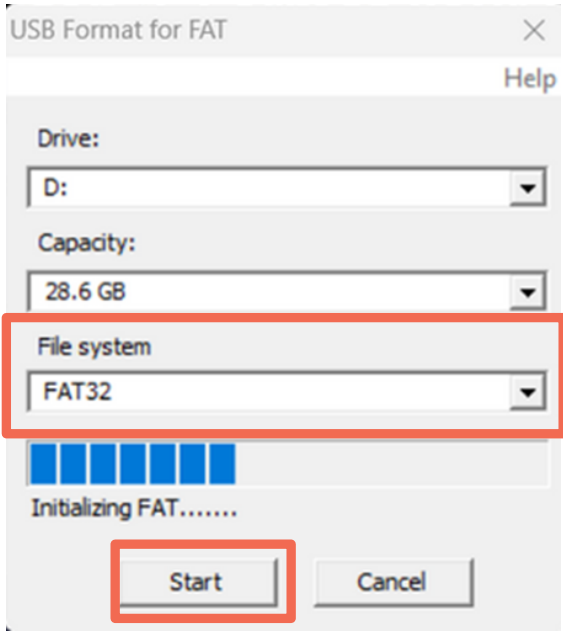


## Step 2. Format USB

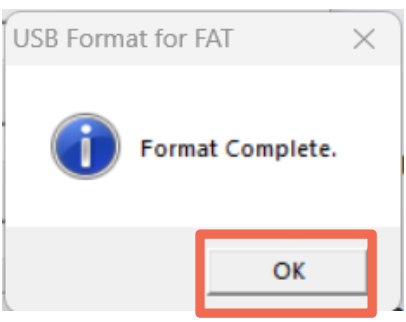
1. Run **LSTC.exe** and insert your USB.
2. When you see your USB in the window, click **Format.**



3. Follow the on-screen prompts. Select **FAT32** as the File system option.

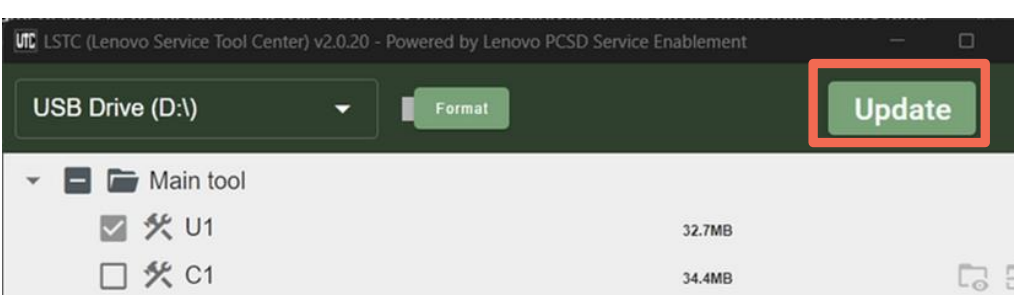


4. Click **Start** to format. Then, click **OK** once the formatting is complete.



## Step 3. Update U1

1. U1 is selected by default; you must select any other tools you want to install.
2. Click **Update.**

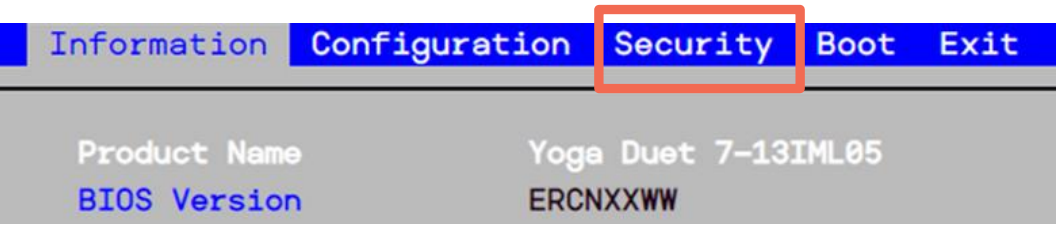


3. You'll see a green **Done** circle when the update is complete.
4. Click the green circle to return to the **LSTC** interface.

# Step 4. Disable Secure Boot

* This process varies by machine.

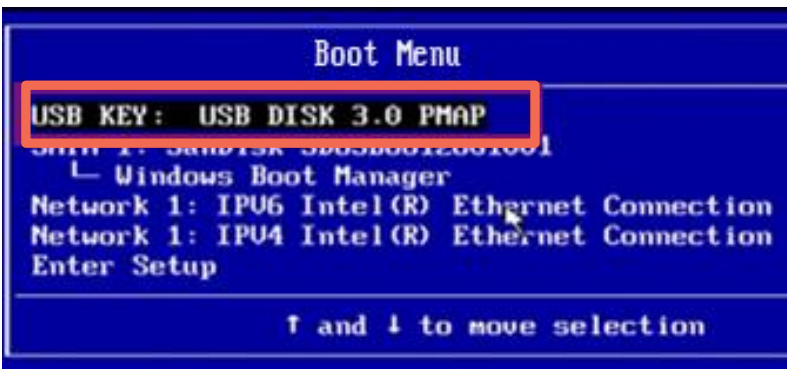
1. Press **F1, F2, or Enter repeatedly,** or the **Novo button**, to enter BIOS Setup Utility.
2. Select **Security**, then **Secure Boot.**



3. Change **Enabled** to **Disabled.**
4. Select **Exit** and save changes or press **F10.**
5. Insert your U1 USB, then press ctrl+alt+delete to restart.

# Step 5. Test U1 USB

1. Press **F12 repeatedly** to open the Boot Menu.
2. Select the USB device.



3. If you see this on your screen, your U1 USB is working!
